## Issues Resolved in Academus 2.0.2

### Personal Calendar

When importing a vCalendar file (.vcs), the events were being recorded in Greenwich Mean Time (GMT) and not properly converting the event time to the proper time zone. This issue has been resolved in this patch release and now events are recorded using the local time zone.

### Single Sign Out

Single Sign Out capability has been added to the Academus. Upon logging out of Academus, users will also be logged out of other portal applications and any pop-up windows that had been launched from the portal will also close. This function is currently available to Internet Explorer, Mozilla and FireFox users, but does not support Netscape or Safari users.

### Survey Author

When creating a survey and not entering a Survey title, the following message was displayed:

“Please Specify the Form Title”

The word "Form" was replaced by “Survey” to make the message more intuitive.

### Webmail

When multiple new emails were received, opening and reading one email would change the status to “Read” for all emails within the Inbox, making it difficult for users to tell which emails were actually read. This issue has been resolved in this patch release.

## Known Issues in Academus 2.0.2

### Academus WCM

Refer to Red Dot CMS 6.1 Release notes for browser limitations.

### Briefcase Portlet

The web application name in the download URLs generated in the Briefcase Portlet is hard coded. At the moment, all downloaded URLs expect that the Briefcase Portlet and downloaded servlet will always be deployed within a web application named "AcademusApps". If the name changes, the download links will be pointing to an obsolete location and they will not work.

In a windows environment some special characters like "| : " < > . ? \ / " cannot be used to name a folder. An error message is generated.

In the briefcase folder a user cannot view the available disk space for a shared, LDAP and Network folder.

When editing the name of folder or a file and only changing its case, the changes are not saved. For example, if a user edits the name of folder from "academus" (all lower case) to "Academus" (all upper case), the name does not change.

### Classifieds

While assigning Classified Permissions, if the user is granted the delete permission only, it does not let the user delete any posted classified, instead it works only if the user is granted the ability to manage classified topics.

### CMS Forums

When canceling a post within CMS Forums, the channel fails to render. This issue is being investigated and will be fixed in a future patch release.

When there are eight or more posts within one forum and a user clicks on the "Mark All as Read" link, the status is change to "Read" for only the first seven posts.

### Collaborative Groupware

If a duplicate user exist within the LDAP and both users appear on the same page when adding users to a roster the enroll link does not work. There is no error displayed in the log.

Some FireFox browsers users may have difficulty viewing the Gradebook column headers. These users should download the flash plug in from <http://www.mozilla.org/products/firefox/central.html>.

## Expanding Menus

Due to the Academus theme and skin, the QuickLinks feature (tab dropdowns) only functions on Mozilla based browsers.

## Fragments

Fragments may only be published targeting groups and not individual users even though the group selector allows the individual users to be selected when publishing. The CfragmentManager Channel simply ignores any users that were selected.

Fragment Manager times out with large data set when loaded with large amount of fragments (Example 2000 fragments). This is caused because on each screen rendering each fragment is reloaded one by one regardless of whether it's going to be utilized in the workflow.

Excess PersonDirectory queries are being generated by Unicon services during user login. This increases the data source hits even more when aggregated layout fragments are added. This issue is being investigated and will be fixed in the next patch release.

## Group Manager

While creating a group in the Groups Manager that are not local like PAGES or LDAP, if the portal is not restarted after the group has been created than in some channels like Briefcase and Notification Portlets where the user queries for individual user while adding recipients using the substring that matches the group names that were created will cause the channel to fail. Example: "P" or "AG" etc.

## LDAP

In the Change LDAP Password channel, if the new passwords (New & Confirm) do not match an error message is thrown but the password is changed to what was entered in the "New password" field.

## Live Text SSO

While using Netscape 8.0 selecting Logout or Help link will take the user out of Academus. To get back into Academus the user has to click on the back button on the browser window.

## Notifications Portlet

While composing a message, uploading any attachment file that is above the configured file size limit will not generate any warning message. The user is simply taken to the compose page and the file is not uploaded.

## PAGES Group

PAGES group users will not receive email whenever a Calendar event is added or a survey is published to the PAGES group. The user will receive notification and will be able to access the event and survey when they access the respective channels.

## Personal Calendar

In Personal Calendar a user can use export function even if no event exist. An error message notifying the user will be added in a future release.

When adding a new event and inviting an attendee by entering their email address in the “By email address” field and clicking the “Notify Attendees by Email” box, the attendee receives the invitation by email. However, if the event is edited or deleted and the “Notify Attendees by Email” box is selected again, the attendee whose email address had to be manually entered does not receive the notice.

## Survey Author

Within the Survey Author channel Results Summary, the information provided in the “Sent” field can be misleading. This field does not represent the number of individual users a survey was distributed to when distributing to group. Currently, it only show one if distributing the survey to one group, two if distributing the survey to two groups, if individual recipients are selected by name for a distribution then each of those individuals will be counted.

When creating a survey with multiple questions on a single page, clicking the “Reset” button removes all of the questions leaving only the Page Title section.

## Tab Limitations

Based on the custom skin for your institution there will be an upper limit to the number of tabs that can be displayed properly and the length of the names for the tab. For reference the default Academus 2.0 skin can support the presentation of 15 tabs for a single end user and tab names of up to 20 characters.
