

CAMPUS SOLUTIONS 9.0 INTEGRATION SERVICES

Implementation Services for SAIP

Higher education institutions are looking for more efficient ways to exchange information between Oracle® PeopleSoft® Campus Solutions 9.0 and their learning management system(s) or other academic systems. Oracle's PeopleSoft Enterprise Student Administration Integration Pack (SAIP) is designed to accomplish this requirement. SAIP delivers a scalable, web services-based interface for sharing academic data and allows integration of student records into the academic system of choice. This offers higher education institutions a more efficient integration and superior management control of the administrative, teaching, and learning systems on campus.

Unicon delivers implementation services for SAIP to integrate Campus Solutions 9.0 with institutional academic systems. These systems include standards-based, major vendor-supplied, and open source learning management systems. Unicon also provides development and customization services between Campus Solutions 9.0 and enterprise applications that do not conform to standards.

Unicon understands technology. Since 1993, Unicon has provided learning technology services and solutions to nearly 200 clients, including some of the largest and most prestigious colleges, universities, global publishers, and other Fortune 500 companies. With the right know-how and experience, Unicon plays a critical role in the technology-driven transformation of higher education.

IMS LISv2 Standard Specification

Oracle's Student Administration Integration Pack (SAIP) is constructed on the IMS LISv2 (Learning Information Services) Standard Specification. This Specification provides standard information models and protocols representing person, courses, enrollments, and outcomes.

Unicon

Unicon, Inc. specializes in providing software consulting services which include the delivery of technology solutions and support, systems integration, and software engineering. The company effectively utilizes open source frameworks, applications, and software to provide enterprise-level portal, learning, messaging, and authentication solutions.

Unicon is a member of the Oracle Partner Network, a contributing member of the IMS Global Learning Consortium, a Sakai Commercial Affiliate for the community source Collaboration and Learning Environment, and a Jasig Partner and authorized Solution Provider for both CAS and uPortal.

Implementation Services for SAIP

Using Unicon to Deliver the SAIP Solution

Unicon's commitment to delivering technology solutions and support, systems integration, and software engineering allows Unicon to draw on the company's broad experiences for the purpose of solving institutions' challenges and needs in implementing SAIP.

Unicon offers the following services for SAIP:

- Implementation planning
- Activation and configuration
- Testing and validation
- Custom development for new integrations

Unicon assists institutions in strategic planning for the implementation of SAIP. The implementation planning service focuses on goal setting, team and organizational alignment, as well as tactical planning. This will help set the foundation and create a sound SAIP implementation plan.

In implementing SAIP, Unicon configures the Integration Broker, allowing people, course, and enrollment records to be replicated into institutions' academic system(s) based on a defined level and timing. Once configured, Unicon activates the initial record data, authorizing the information to be transferred out of Campus Solutions 9.0 to external academic systems.

Testing of the SAIP implementation confirms that future integration maintenance is concrete, allowing integration updates at anytime. Unicon and the institution work together to verify the integration from SAIP into the academic system(s). This verification determines if the final SAIP implementation has accomplished the requirements established during implementation planning.

Unicon offers custom development services for new integrations to help institutions meet specific requirements and preferences. The custom development services integrate the administrative and academic systems that support the education experience. This allows institutions the freedom, power, and flexibility to choose the desired systems to integrate based on the needs of institutions and their constituents. Academic systems include student systems, learning management systems, collaboration and communication, portfolios, analytics, identity management, library systems, and parking.

For a discussion of your specific needs, please contact Unicon via the information to the left.
