

# UNICON SERVICES FOR SHIBBOLETH

## Policy-driven authentication and authorization enables control over an institution's data and its user's privacy.

Shibboleth Single Sign-on and Federating Software was developed specifically to address numerous challenges for higher education institutions. Some of these challenges being: multiple passwords required for multiple applications, scaling the account management of multiple applications, security issues associated with accessing third-party services, privacy, interoperability within and across organizational boundaries, enabling institutions to choose their authentication technology, and enabling service providers to control access to their resources.

Allowing Unicon's highly skilled experts to deploy Shibboleth or integrate Shibboleth on your existing applications will help your institution eliminate these challenges.

The Shibboleth® System is a standards-based, open source software package for web single sign-on across or within organizational boundaries. It allows sites to make informed authorization decisions for individual access of protected online resources in a privacy-preserving manner.

Unicon offers consulting services for adopting the Shibboleth System. The Higher Education Services group supplies expert guidance, execution, and development necessary to meet the specific needs of the institution, maximizing results in adopting Shibboleth.
