**Identity and Access Management Services**

IDENTITY PROVIDER SOLUTION IN THE CLOUD

Ease of Secure Collaboration across the Enterprise

Secure avenues of collaboration for research and other endeavors is essential to enterprises both small and large. Having an Identity Provider solution that provides Federated web single sign-on is a secure solution, allowing institutions and organizations to safely connect to applications through a seamless login experience to a federation such as InCommon. Unicon works with several identity solutions that provide web single sign-on capabilities and allow sites to make informed authorization decisions for individual access of protected online resources.
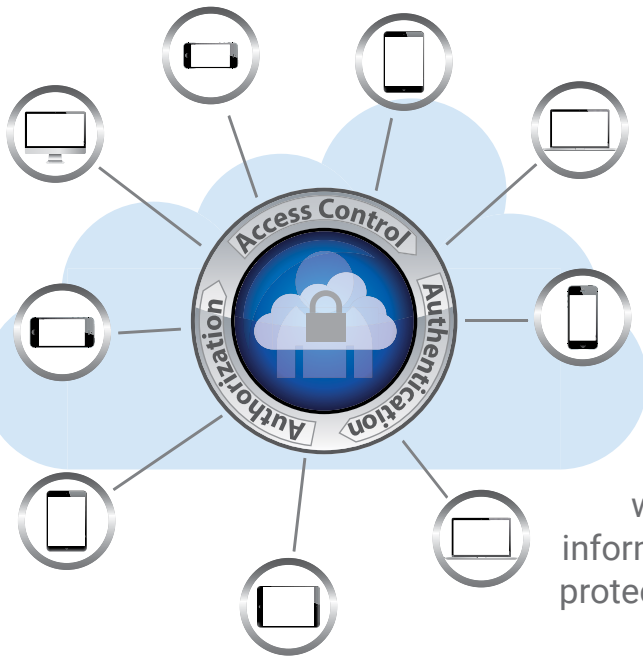

Federated Web Single Sign-On in the Cloud

Establishing federated web single sign-on is a complex exercise, requiring an expert team for assessment, implementation, customization, and maintenance. Drawing on the experience from hundreds of federated web single sign-on consulting and hosting engagements, our team has created a managed service offering by developing a supported identity provider (IdP) environment in the cloud.

Our team can customize, configure, and maintain the Identity Provider to an institution or organization's specifications, ensuring a rapidly deployed solution to meet the unique needs of our clients. This solution increases operational efficiency while shrinking expenditures through the reduction of directly-employed staff.

UNICON®

An Effective, Secure Cloud Solution

Cloud solutions are flexible, secure, and cost-effective ways of providing enterprises reliable access to the applications they depend on daily. The Unicon Identity Provider in the cloud solution secures these applications through open source federated web single sign-on technology. The redundant, load-balanced cloud infrastructure is highly available, fault-tolerant, and can auto-scale to meet unexpected demands.

The IdP is hosted within the most secure region of the cloud and the solution is supported by a knowledgeable, responsive team of IT experts. Unicon's experienced team of technology professionals delivers engineering and operational support, including ongoing maintenance of the cloud IdP infrastructure, resulting in peace of mind for the client.

Services for a Hosted IdP

The hosted IdP in the cloud solution provides a standard and repeatable process for IdP managed services in a cloud environment, with a straightforward all-inclusive pricing model.

Base Unicon services include:

Requirement Identification
Set-up and Configuration
Technical Support
Regular Maintenance Updates

Additional services:

Multi-Factor Authentication
Customization
Increased Technical Support Option

Rely on the IAM Experts

Unicon has assembled a seasoned team of IAM professionals. This team is prepared to delve deep into the many facets of IAM, equipping institutions and organizations with the tools they need to confidently deliver a safe and compliant IT infrastructure. The team is dedicated to solving IAM challenges, and will help institutions use IAM for better efficiency, governance, accountability, privacy, and risk management. This team establishes a reliable open source solution that is easy to use, incredibly advanced, and much less expensive than traditional solutions.
