

Extend Your Okta Identity Provider's Capabilities with Unicon's Federation Gateway

The Okta Identity Cloud is a flexible and widely-used identity provider (IdP) that facilitates modern identity strategy. It securely connects the right people to the right technologies at the right time by supporting 1-to-1 integrations between IdPs and service providers (SPs).

You can extend Okta's cloud identity platform to provide even more flexibility with Unicon's Federation Gateway. This cloud-based service bridges the gap between IdP and federation, enabling Okta to connect with identity federations such as InCommon, Canadian Access Federation (CAF), and eduGAIN.

Advantages of Unicon's Federation Gateway

- Using the Federation Gateway, you can easily connect Okta to the identity federation of your choice, allowing seamless set-up of participating SPs—you no longer have to add each SP to Okta individually.
- You can choose from a variety of attribute release policies, including releasing all attributes, releasing no attributes, and allowing the end-user to choose which attributes to release.
- The Federation Gateway is hosted in AWS and uses AWS technology to provide redundancy and scalability.

Why work with Unicon?

- As an Okta Partner, Unicon developed the Federation Gateway hand-in-hand with Okta, working closely with the Okta team to make sure that the Federation Gateway does what Okta users need.
- Unicon can share expertise to help your organization manage and maintain Okta and the Federation Gateway in your environment.
- The Federation Gateway from Unicon can help Okta provide identity management for your people, devices, and applications.

Unicon's team of Identity and Access Management (IAM) experts are ready to help you get started; contact Unicon at <https://www.unicon.net/contact-us>.
